LARAVEL VUE JS SECOND ROUND INTERVIEW

CODE CHALLENGE

Instructions:

1. Write Laravel back end to implement CRUD REST APIs for the below ER diagram.

2. Create a front end interface to consume the above APIs using VueJS.

3. Ensure your APIs are authenticated.

4. Use database of your choice to persist data (preferably MySQL).

5. Upload your code to a version control of your choice and share link to your repository.

Note:

Good code practice is what we a looking for and therefore you stand a chance for selection if you demonstrate skills in unit/feature testing, reusable design patterns and general mastery of development and deployment process.
